

WHAT IS CLAIMED IS:

1. A holder, comprising:  
a first component holding unit for holding an image pickup device on  
a main surface of a board; and  
a second component holding unit for holding another component on  
said main surface at a location different from a location of said first  
component holding unit,  
said first and second component holding units being formed as a  
single piece.
2. The holder according to claim 1, wherein said first component  
holding unit is designed to hold said image pickup device in a state being  
directly contacted to said main surface.
3. The holder according to claim 2, wherein said first component  
holding unit is in a frame shape for surrounding and holding a periphery of  
said image pickup device.
4. The holder according to claim 3, wherein said first component  
holding unit is in a frame shape with upper and bottom surfaces opened.
5. The holder according to claim 1, wherein said second component  
holding unit is for holding a receiver.
6. The holder according to claim 1, wherein said second component  
holding unit is for holding a display device.
7. The holder according to claim 1, formed with resin by integral  
molding.
8. A portable telephone provided with the holder according to claim  
1.
